CLATUU™
FREEZING FAT AWAY

The ultimate solution to reduce stubborn fat

Tried exercise and dieting but neither is working? Clatuu is your answer.

Clatuu Freezes Your Fat Away by using precisely controlled cooling to eliminate stubborn fat that is resilient to exercise or diet.

Clatuu works by gently drawing fatty areas into the patented 360° applicators and cooling the area to a temperature that causes fat cell apoptosis – while keeping normal cells intact.

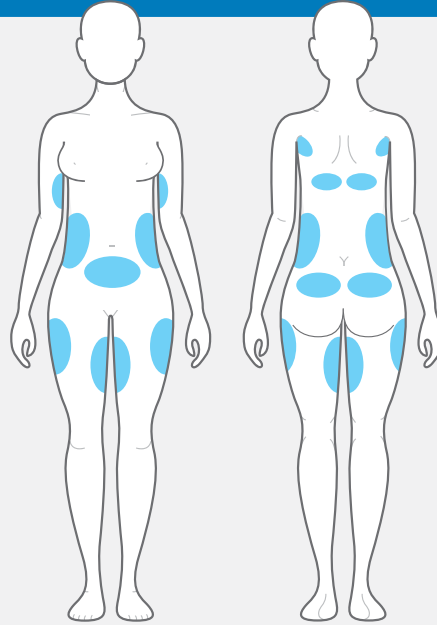

Built-in sensors maintain a constant target temperature that assists in the best possible reduction.

The results of Clatuu are proven and visible, and with the ability to treat two sites at once, you can cut down treatment time in half giving you time to do the things you want to do.

Freezing fat away gets your body to a slimmer, tighter shape that was meant for you – naturally.

Clatuu targets several **stubborn fat areas**

Before

6 weeks after second treatment

4 weeks after second treatment

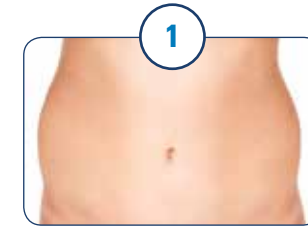

Before

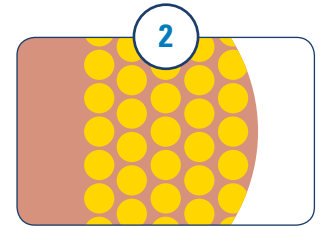

6 weeks after one treatment

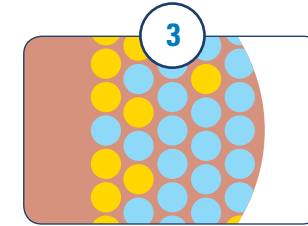

How Clatuu freezes your fat away.

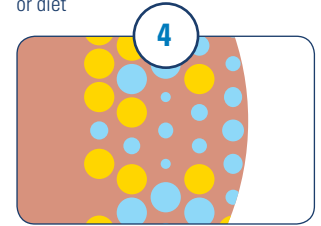

1 Some areas of our body have bulges of stubborn fat

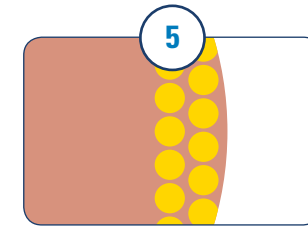

2 These areas are due to underlying fat cells that are resilient to exercise or diet

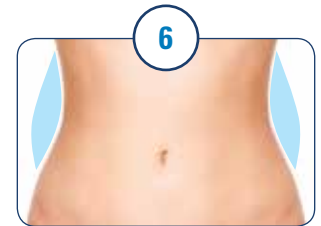

3 Controlled cooling with the CLATUU targets and freezes these fat cells

4 Through a process called Cryolipolysis, these fat cells gradually die and are eliminated from the body

5 Reduction in the fat layer occurs in the following weeks and months after treatment

6 This results in a natural-looking and contoured appearance without the surgery

You get visible, measurable and lasting results without the surgery.
