

FREQUENTLY ASKED QUESTIONS

HOW DOES FRAXIS TREATMENT FEEL?

Laser and RF acne scar reduction treatments involve only mild discomfort. You may experience a prickling sensation as the skin tissue is heated. A topical anaesthetic is applied to the target area prior to treatment.

WHAT HAPPENS DURING TREATMENT?

The operator will cover the entire. Tiny dots of laser will be scattered between sections of healthy, untouched skin to stimulate the tissues' regenerative processes. Because Fraxis Rejuvenation combines fractional CO2 laser treatment with micro-needle fractional RF treatment, both superficial and deep stimulation of the skin is achieved in the one treatment.

HOW MANY TREATMENTS WILL I NEED?

The condition of your skin will dictate how many treatments you need to undergo. Between three and five is an average number.

HOW SOON WILL I SEE RESULTS?

Although you will begin to see improvement within a few weeks, your skin will continue to renew itself and will actually look even better a few months or so after your last treatment.

For best ongoing results, you should always protect your skin from direct sun exposure. Always cover up and use a good SPF sunblock when out in the sun.

GIVE YOURSELF THE SKIN YOU DESERVE WITH FRAXIS REJUVENATION

FRACTIONAL CO2 LASER & RF FOR ACNE SCARRING

- Suits almost all skin types
- Minimal downtime
- Minimal discomfort
- Continuous improvement
- Faster, more precise treatment
- Low risk of side effects

RESTORE SMOOTH, CLEAR SKIN

Your skin took a beating during adolescence. Thankfully, the acne has gone, but disfiguring scars remain.

It's time to help your skin feel smooth again.

In the past, aggressive treatments such as chemical peels and ablative procedures involved extensive downtime and discomfort. They were not suitable for all skin types.

Fraxis Rejuvenation treatments harness your body's own potential to heal itself and to create fresh new skin in place of scarred skin. They stimulate collagenesis (the production of collagen in the skin's deeper layer) to lift up pitted scars, smooth the appearance of scars and improve the texture of the skin.

STEP 1

Using a precisely controlled energy source, your skin cells are stimulated to produce additional supplies of collagen and elastin, the skin's building blocks.

STEP 2

An intensive cell renewal reaction is triggered in the skin's deeper layer (dermis). As collagen is produced at this level, the skin's texture improves, becoming smoother as scars flatten.

STEP 3

New healthy cells replace the damaged ones. Scars are gradually diminished, and your skin becomes smoother textured and more even toned.

Unlock the potential for remodelling within your own skin cells. Fraxis Rejuvenation's technology works to stimulate your skin to return to the smooth texture you used to have.
