

## FREQUENTLY ASKED QUESTIONS

### HOW DOES PASTELLE TREAT SKIN PIGMENTATION?

Pastelle's advanced pulse system is delivered at the right intensity to act on the darkened areas of pigment, minimising the risk to harm the skin and surrounding tissue.

### WHAT RESULTS CAN I EXPECT?

You may experience some initial darkening of the treated areas. This is temporary, and after about 5-7 days, they will begin to fade. They will become progressively lighter with each treatment. Usually 3-4 treatments are required to reduce most of the pigment.

### WILL PASTELLE SUIT MY SKIN TYPE?

Pastelle can be used successfully on light or dark skin types. As well as addressing pigmentation, Pastelle is an excellent choice for all-round skin rejuvenation treatment.

### HOW WILL THE TREATMENT FEEL?

You will be aware of light warmth in the treatment area. You will feel a slight sting, as if a rubber band is being snapped against your skin, but this is minimal, and highly tolerated by patients.

For best ongoing results, you should always protect your skin from direct sun exposure. Always cover up and use a good SPF sunblock when out in the sun.

## PASTELLE FADE SUN DAMAGE & SKIN PIGMENTATION

### LASER FOR NO DOWNTIME PIGMENTATION TREATMENT

- Targets darkened areas of pigmentation
- Breaks up areas of pigmentation, allowing the body to lighten and clear it naturally
- Surrounding tissue is not damaged
- Can treat light or dark skin types

# RESTORE YOUTHFULNESS

Pastelle targets and destroys freckles, pigmented lesions, sunspots and other dark pigmentation on your skin.

## STEP 1

Your skin cells are stimulated with a precisely controlled energy source that causes the pigmented cells to break down.

## STEP 2

This triggers a renewal process, producing quantities of the chemicals that gave your skin its youthful clarity, elasticity and fullness. Your body replaces the damaged skin cells with new, healthy cells.

## STEP 3

The result is a more even skin tone and a younger, firmer, appearance. Pastelle laser treatment also smoothes superficial lines and wrinkles, helping to turn back the clock for your skin.

*In some circumstances, Pastelle treatment might need to be postponed. You should seek medical advice if any of the following apply to you:*

- You have tanned skin
- You have a disease that is stimulated by light (e.g., Epilepsy)
- You are using photosensitive drugs (e.g., Roacutane)
- You are pregnant

# PASTELLE BANISH PIGMENTATION

Before

After

*\* Individual results may vary based on the aggressiveness of treatment and skin condition.*

It's well known that a smooth "peaches and cream" complexion gives you a more youthful appearance.

Your skin gets its colour from a pigment called melanin, which is produced by specialised skin cells. If these cells become damaged or unhealthy, they can become highly erratic in their melanin production, leading to darker or lighter patches of skin. The dark patches are sometimes referred to as 'age spots', but younger people can also develop them.

# RESULTS YOU CAN SEE AND FEEL
