

# FREQUENTLY ASKED QUESTIONS

## HOW DOES V-LASER TREAT FACIAL REDNESS?

V-Laser's true square pulse system is delivered in waves at the right intensity to act on vascular lesions that are visible through the epidermis. The bursts of energy are delivered in short pulses that are easily tolerated.

## WHAT RESULTS CAN I EXPECT?

You can expect to see some improvement straight away for visible vessels and within a few weeks for background redness, then improvement can further continue or you may have additional treatment to improve your outcome.

## WILL V-LASER SUIT MY SKIN TYPE?

V-Laser can be used successfully on various skin types. As well as addressing background redness and visible vessels, V-Laser is an excellent choice for all-round skin rejuvenation treatment.

## CAN ANYONE BE TREATED WITH V-LASER?

You should consult your doctor first if you have tanned skin, a disease stimulated by light (e.g., Epilepsy), if you are using photosensitive drugs such as Roaccutane, or if you are pregnant or breastfeeding.

## HOW LONG WILL THE RESULTS LAST?

As with all treatments, some of the conditions may recur. Rosacea typically requires a maintenance program. However, regardless of the condition being treated, periodic treatments will help maintain your good results.

For best ongoing results, you should always protect your skin from direct sun exposure. Always cover up and use a good SPF sunblock when out in the sun.

# V-LASER

## ELIMINATE FACIAL REDNESS, VEINS & CAPILLARIES

- Reduces background redness
- Targets visible vessels
- Contact cooling to protect your skin
- Specifically targets blood vessels
- Contact cooling for comfortable treatments
- Stimulates collagen growth to improve skin tone and texture

# V•LASER RESTORES YOUR BEST COMPLEXION

V•Laser treatment is a non-invasive and highly effective way of reducing the symptoms and appearance of facial redness.

## STEP 1

The skin is cleaned and a clear coupling gel will be applied to the treatment area. This shows a telangiectasia (spider vein) before treatment.

## STEP 2

Light energy is delivered to the skin with the most advanced square-pulse technology. The operator moves the head over the treatment area. You will feel a sensation like a rubber band being snapped against your skin.

## STEP 3

Light energy passes through the skin and is absorbed by the haemoglobin in the blood vessels, weakening the vessel walls so the body can break down the unwanted vessels. Spider vein immediately after treatment

## ARE YOU TIRED OF RED ALERT?

Are you on chronic red alert? The symptoms of rosacea include:

- enlarged capillaries (telangiectasia)
- a permanent flush across the nose and cheeks
- non-tender lumps under the skin
- mildly swollen cheeks and nose (hyperplasia)
- frequent blushing
- a sensation of burning or stinging
- a rash across the face or chest

Now there's a simple, effective way to return your complexion to normal. V•Laser is the most advanced and acclaimed technology for non-invasive removal of vascular lesions on the face and body.

Besides being an excellent treatment for most causes of facial redness, V•Laser also provides excellent all-round skin photo rejuvenation. It stimulates collagen growth in the deep dermal layers, helping to restore volume and elasticity to the skin's support system.

Fine lines and wrinkles are diminished, pore size is reduced, and dull skin regains a brighter, more youthful appearance.

V•Laser treatment is fast and comfortable — with no downtime. You can return to your normal activities immediately after treatment, with predictable and dramatic results.
