CLARITYII™
with IntelliTrak® technology

*Laser hair removal,
and more!*

Laser *Hair Removal, and More!*

Clarity II laser hair removal is a convenient, non-invasive way of achieving permanent hair reduction.

With two wavelengths available, Clarity II provides safe and effective hair removal for patients of all skin types.

Its digitally-powered platform enables precise control for effective treatments and exceptional versatility to address other common aesthetic concerns. Clarity II can treat small superficial vessels and also provide laser toning energy to help brighten the appearance of your skin tone.

Best of all, your treatments can be customized to meet your specific needs and goals, safely and comfortably.

Only Clarity II provides IntelliTrak™ which rapidly and consistently covers large hair removal areas for faster, more comfortable treatments. What used to take ~30 minutes can now be done in ~15 minutes.

Small, superficial vessels can be closed off using laser energy to improve the appearance of your skin.

Laser toning, or skin revitalization, is a popular, low downtime treatment that can help lighten and brighten the skin, while stimulating new collagen.

FAQ

How does the treatment feel?

Most patients experience a warm snapping sensation on the skin. Clarity II has a specialized skin-cooling system that can provide extra comfort for most treatments.

How many treatments will I need?

For laser hair removal, most patients need 5 or more treatments spaced out by 4-8 weeks to achieve effective hair reduction. This is due to body hair growing in cycles. For small vessels, or laser toning, patients could achieve improvements in as few as 1-3 treatments.

How long does a treatment take?

Depending on the number and size of treatment areas and types of concerns, it could be anywhere from 10-30 minutes. Ask your provider for guidance about how Clarity II can efficiently perform laser hair removal and more for you.
