CLEAR and SMOOTH

DERMA V™

The DermaV Clear and Smooth treatment utilises dual-wavelength (532nm and 1064nm) long-pulsed Nd:YAG laser technology with integrated cryogen cooling to selectively target vascular and pigmented irregularities, promoting dermal remodeling and collagen synthesis for skin that is clear and smooth.

VASCULAR

DERMAVTM

DermaV combines the precision of a 1064nm Nd:YAG laser with advanced cooling and pulse control, making it the gold standard for treating a full spectrum of vascular conditions. Given that vascular irregularities are present in the majority of aesthetic patients, addressing these concerns is critical for achieving optimal skin tone uniformity and long-term rejuvenation outcomes.
