

Key Advantages

- ✓ Over 10 years of clinical research
- ✓ Drug and hormone-free formulations
- ✓ Comprehensive at-home support system
- ✓ Patented biomimetic growth factor technology
- ✓ Advanced nanoliposome delivery for enhanced absorption
- ✓ Designed to support healthier, fuller-looking hair
- ✓ Suitable for use alongside other hair restoration treatments

Safe for all Genders

KeraFactor® formulations are safe for all hair and skin types.

KeraFactorMD In-Office Treatment

A non-invasive, in-office treatment designed to support scalp health with no downtime, **KeraFactorMD** begins by gently preparing the scalp using microneedling or laser-based technology to create microchannels, enhancing absorption.

What is KeraFactor®

KeraFactor® is a drug and hormone-free approach to hair rejuvenation — centered around a patented, concentrated blend of biomimetic growth factors, skin proteins, and targeted compounds designed to support a healthier, more balanced environment.

● This core technology is carried across all KeraFactor® formulations, from scalp and hair care to lash and brow applications

Unlike traditional topical products, KeraFactor® delivers ingredients in optimized concentrations through a proprietary nanoliposome delivery system, designed to support more precise absorption and targeted distribution. This multifactorial approach helps address underlying imbalances associated with thinning and low-density hair.

Nanoliposomes

Each growth factor and compound is individually wrapped in a nanoliposome carrier with a particle size of <200nm, which helps ensure absorption to the optimal location.

GF Without
Nanoliposome

GF With
Nanoliposome

Nanoliposomes deliver thousands of hyper-concentrated growth factors essential for scalp and hair revitalization.
