Frequently asked questions

What can I expect from the treatment?

You may experience mild discomfort throughout the treatment, which will vary depending on the condition of your skin and the area being treated. Your provider will work with you to ensure the procedure is as comfortable as possible.

How long does a treatment take?

Depending on the size and area to be treated, your session could last from 5-20 minutes.

What will happen after the treatment?

You may experience mild redness and puffiness immediately following the laser treatment, but you should be able to return to normal activities right away. You can apply light makeup if desired. Don't forget your sun protection!

How long before I see results?

Some lesions may immediately disappear while others will take time to be broken down and removed by your body. Your skin will continue to regenerate and revitalize for several weeks. Your provider will work with you to determine the number of treatments you will need to achieve your desired results.

DERMA V[™]

The future of *vascular*
and pigment treatments

PAT_GL_DermaVVersion1.07_2024_exp24months

Aesthetic Versatility

Tired of seeing red?

DermaV™ is incredibly effective in reducing the appearance of redness, flushing, and superficial veins.

Got spots?

DermaV offers a comfortable, non-invasive treatment to help reduce unwanted pigment and achieve a bright, healthy-looking complexion on face, neck, and décolletage.

Ready for the skin you deserve?

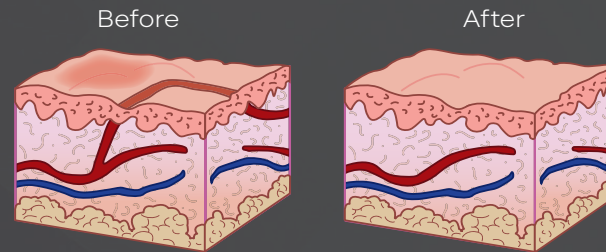

The unique Clear and Smooth™ treatment with IntelliTone™ technology comfortably delivers improved tone and texture to keep your skin looking and feeling amazing!

How it works

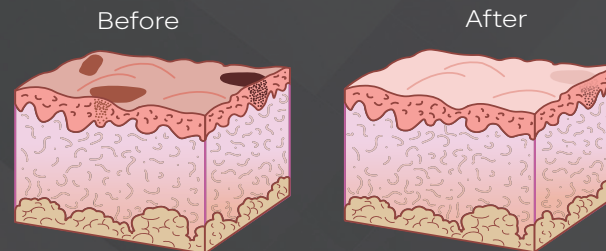

Vessels

DermaV applies laser energy that is absorbed by your blood vessels and converted to heat, which contracts the vessel to help reduce its appearance near the skin surface.

Pigment

Using controlled heating, the DermaV laser energy targets unwanted, visible brown pigment while protecting the top layers of your skin with specialized skin cooling technology.

What can DermaV treat?

Vascular lesions can arise from natural sources including sun damage, genetics and the aging process. DermaV is proven to treat a wide range of vascular conditions, including rosacea, facial veins, broken capillaries, and spider veins on the body and legs. Age spots, freckles, birthmarks, and other types of benign pigmented lesions can occur naturally all over the body. DermaV is proven to help reduce the appearance of unwanted pigment in most patient skin tones.

“

I found the treatments to be pretty painless. My worst veins, the blue ones, are gone completely. The red ones disappeared quickly, too! Overall, I've had a very positive experience with DermaV.

— PATIENT PAG, NASHUA, NH
