LIGHT THERAPY FOR REJUVENATION AND HEALING

SMARTLUX

HEAL, REJUVENATE,
RELIEVE

NON-INVASIVE TREATMENTS FOR VARIOUS CONDITIONS

SmartLux LED (light-emitting diode) Light Therapy is a dedicated, single-platform system which emits narrow-band wavelengths of bright light to ensure efficient photostimulation of targeted skin cells. The light penetrates to the subcutaneous tissue – the deepest layer of your skin – it is then absorbed by the mitochondria, the energy properties of cells. They are energised – stimulating cell reproduction and regeneration.

It stimulates the natural healing and tissue remodelling processes of your body. As cells reproduce more rapidly and blood circulation is improved, the building blocks for more youthful, healthy skin, with the increased production of collagen and elastin – improving and speeding up skin healing. Your skin will appear plumper and healthier.

SmartLux LED is a highly effective and beneficial treatment for wound healing, skin disorders and general health, with the added benefit of being a pain free and relaxing treatment, with no downtime. LED treatments are suitable for all skin types.

FREQUENTLY ASKED QUESTIONS

What to expect during the treatment?

During the treatment session you will feel a slight feeling of warmth over the treatment area, but there is no discomfort or pain – this is only temporary whilst being treated.

How long does the treatment take?

Treatments take only 15-25 minutes, depending on which areas and conditions are being treated.

What to expect after the treatment?

There is no downtime, so you can resume normal activities immediately after your treatment session.

How many treatments will I need?

This varies from patient to patient. It is recommended a course of 6-10 treatments, twice weekly for best results – this will depend on each individual condition being treated*.
