

## CUSTOMISED TREATMENTS PREDICTABLE RESULTS

### How does UI Cube work?

The evolutionary UI Cube utilises strong Electromagnetic Stimulation technology to penetrate deep into the human body to strengthen the pelvic floor muscle and prostate located deep within the human body.

It maximises the effects in treating an array of symptomatic problems, including urinary incontinence, prostatism, sexual and erectile dysfunction by contracting these muscles.

The UI Cube provides a non-surgical treatment with maximum benefits than that of doing general and regular Kegel exercises – providing more specific, targeted, and quicker results in less time.

The good thing about a treatment with UI Cube is that you are fully dressed throughout the treatment.

Relieve stress, tension, boost and your confidence.

**The UI CUBE treatment for 30 minutes is the same as doing 12,000 Kegel exercises**

Electromagnetic Therapy produces gentle, low induction pulses which help to stimulate and rejuvenate the cells in the body. This can lead to improved health and well-being.

Electrical stimulation (ES) therapy involves the application of electrodes to affected areas of the body for the purpose of delivering electrical currents to help stimulate and contract the muscle of the problematic area.

By penetrating deep inside the body, causing not only the surface but the muscles deep inside to stimulate.

During a treatment you will be fully clothed and seated on the cube. Most people feel nothing more than a slight warmth and pulse. Occasionally minor tingling sensations are felt in parts of the body. People with painful conditions can have a slight increase in the amount of discomfort that they feel, but this will only last for one to three sessions. Many people report improved results after just a few treatments.
