

Reforming patients' bodies and expectations with

TESLAFormer™

AS THE LATEST BODY SCULPTING TECHNOLOGY TO ARRIVE ON AUSTRALIAN SHORES, TESLAFORMER DELIVERS NEXT-LEVEL FAT BURNING AND MUSCLE BUILDING RESULTS.

Body contouring is one of the most sought-after treatments of 2019. But what if you could offer patients fat loss and muscle building in a single non-invasive treatment? Well, with TESLAFormer, you can.

TESLAFormer is a new body forming device that uses the latest Functional Magnetic Stimulation (FMS) technology to burn fat and strengthen muscle in the glutes, abdomen, hamstrings, arms and pelvic floor.

This innovative platform is the only system capable of operating all muscle groups. It comes with set programmes for different parts of the body, but can also be used manually by trained therapists. TESLAFormer can induce more than 50,000 muscle contractions in a single session, making it a powerful and effective way to sculpt and tone the body.

Developed in Europe by Iskra

Medical, TESLAFormer is now available throughout Australia through local distributor Cryomed Aesthetics.

How it works

TESLAFormer is a highly concentrated, targeted and effective device for body forming. Like exercise, TESLAFormer triggers motoric nerves and excites muscle contraction. Studies show that repeated exposure to FMS results in increased muscle mass.

The FMS magnetic field generated by TESLAFormer propagates through clothes, skin and bone. Once it has reached the deep tissue, this field is transformed via induction into a local electrical field, which depolarises the motor nerves. Signals then travel along the nerves to the muscles and force them to contract. Muscle contraction is then induced repeatedly, without the muscles becoming fatigued.

Advantages

- Strengthens muscle
- Reduces fat
- Non-invasive
- No downtime
- Delivers more than 50,000 contractions per 30 minute session
- Electromagnetic energy
- No operator required
- No preparation required
- Dual sculpting

The energy required to support this process is sourced from local fat deposits. During treatment, local fat tissue in the target area quickly depletes. The continuous intense muscle contractions also force the muscle to increase in strength and volume. In this way, TESLAFormer treatments create natural looking results.

With applicators built into the seat and backrest of the chair, the magnetic field can reach structures inside the pelvic floor and back. Just by sitting on the chair, FMS works the deep pelvic floor muscles that even people who train regularly tend to neglect.

In addition to muscle development, core therapy, physical therapy, posture improvement and rehabilitation, TESLAFormer can be used to treat stress urinary incontinence in women and some of the symptoms of prostate in men.

TESLAFormer in practice

TESLAFormer treatments are a great option for patients who want to look fit and healthy, not just reduce excess fat. FMS is also suitable for patients

who are not candidates for FMS.

No preparation is required before the TESLAFormer treatment and a typical treatment lasts 30 minutes. During this time, the device can deliver more than 50,000 muscle contractions, with the TESLAFormer reaching a magnetic field strength of up to three Tesla.

A total of eight sessions carried out every other day is recommended for best results. There are no negative side effects of TESLAFormer treatments, once all contraindications are taken into account.

TESLAFormer boasts a large, easy to operate user interface. Applicators can be positioned manually to find target motor units and enable effective stimulation. TESLAFormer also comes with a set of pre-prepared protocols for performing therapies based on diagnosis or tissue type. Additionally, users can create custom protocols when required.

TESLAFormer treatments can be performed manually by a trained therapist or in the absence of a therapist by attaching the applicator to the body or fixing it to the stand or trolley. In this way, the device is easy to integrate into aesthetic medical practices and can quickly deliver a healthy ROI.

FMS is changing the way we approach body sculpting by giving patients the aesthetic they desire, while delivering a workout in the process. This innovative platform is a game-changer in the field of aesthetic medicine, offering truly desirable outcomes without discomfort, surgery or downtime. **AMP**
