CLINICAL STUDY  
Dr. José Ramón Vázquez Casas

# STUDY ON SECURITY AND EFFICACY OF ADIPOCYTOLYSIS THROUGH FREEZING (Adipocytolysis assisted by freezing)

STUDY CONDUCTED BY:

> Dr. José Ramón Vázquez Casas – *Medical Director in Centretimer.*

CENTER STAFF:

> Dolors Cámara – *Center Director.*

> Dr. José Ramón Vázquez – *Medical Director.*

> Dra. Paloma Mejina – *Plastic surgery.*

> Dra. Maria Foglia – *Cosmetic surgery. ENT Surgery.*

> Dr. Luis Navarro – *Vascular surgery and angiology.*

## PROCEDURE:

- > Prospective observational study.
- > 30 cases of abdominal freezing, conducted by vacuum with the CoolTech® to -8°C during one hour. No other intervention will be taken.
- > Results assessment after 45 days.
- > Abdominal perimeter assessment through a vacuum process in the abdomen area 5 centimeters below the navel
- > Photographic assessment of morphological changes.
- > Satisfaction rate assessment after procedure.
- > Side-effects evaluation: pain, paresthesia, bruising, localized erythema.

INCLUSION CRITERIA:

- > Above 18 years.
- > Sign the consent form.
- > Localized fat on an abdominal level through an ultrasonography bigger than 25 mm.
- > Do not present any contraindication to the technique.

EXCLUSION CRITERIA:

- > Under 18 years.
- > Pregnancy.
- > Severe kidney failure.
- > Severe liver failure.
- > Poorly controlled diabetes with diabetic complications.
- > Cancer.
- > Fever.
- > Raynaud disease.
- > Cryoglobulinemia.
- > Systemic disease affecting the skin.
- > Aversion to cold.

DEMOGRAPHIC DATA:

Assessment on 30 people, 26 women and 4 men with an average age of 43 years od.

RESULTS:

An average reduction of 5,9 on abdominal perimeter.

RESULTS:

Average reduction of 52mm on adipose tissue thickness.

RESULTS:

Index satisfaction rate of 7,5 / 10.

SIDE EFFECTS - PAIN:

Media de dolor de 2 medido por escala EVA.

Pain Scale VAS((Visual Analogue Scale)

SIDE EFFECTS - BRUISING:

Minimum bruising on 26% of the patients

SIDE EFFECTS – SD CONSTITUTIONAL :

Constitutional SD (asthenia, myalgias and fever) 20%.

SIDE EFFECTS - PARESTHESIA:

Presence of paresthesia with an average duration of 10 days

## CONCLUSIONS:

- The adipocytolysis as a result of the freezing process is a non-invasive method of body fat removal, with minimum complications, allowing daily life activities right after the procedure.
- Significant reduction of abdominal perimeter and subcutaneous fat thickness.
- High patient's satisfaction rate after the treatment.
- Female population in their 40s is the main customer for this treatment.
