## Wide range of indications

Vaginal laxity

Stress incontinence

Recurrent thrush

Vaginal itchiness & burning

Dryness and loss of lubrication

Vaginal and vulvar pain or discomfort

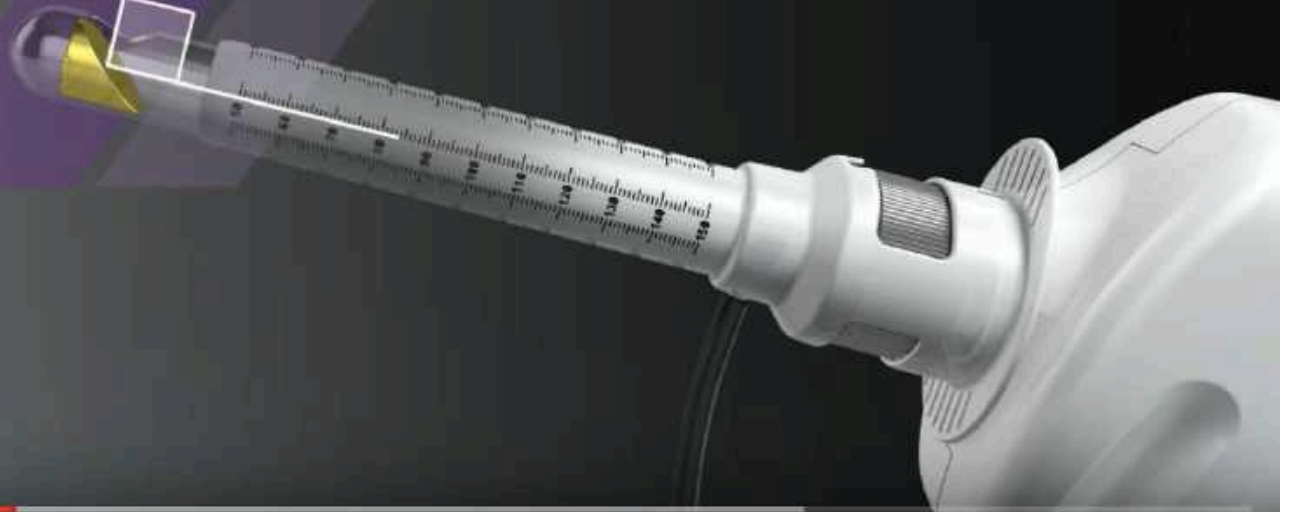

Diminished sensation during intercourse

Dyspareunia (painful intercourse)

**Operating principal**

**90°**

## Operating principal

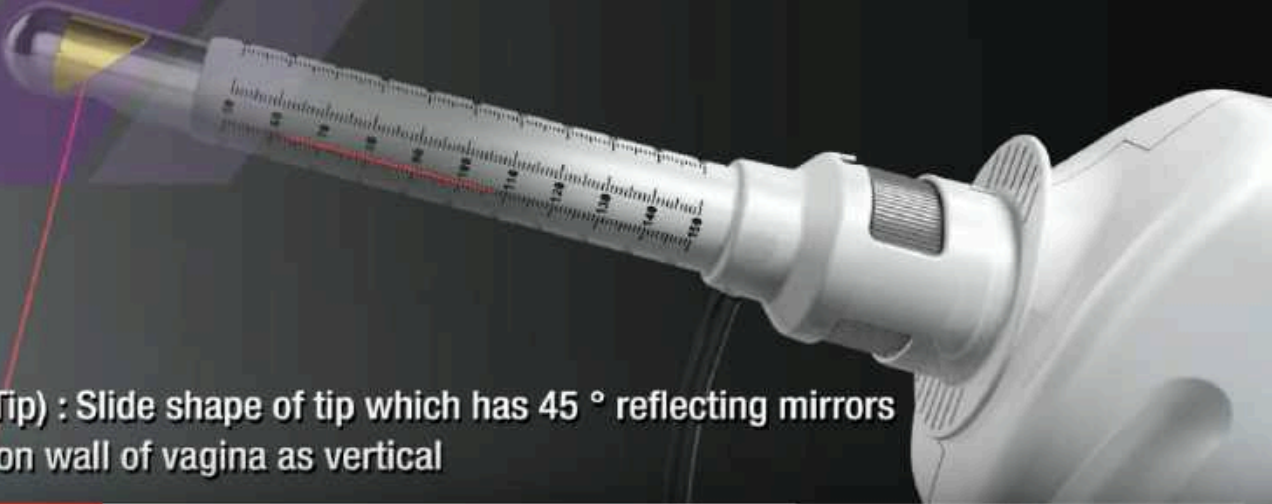

### Benefit of Air flow

- ▶ Reduce the smoke interference to the laser beam
- ▶ Assist with turning the handset to avoid being over treated

## Operating principal

90 angle probe (Vaginal Tip) : Slide shape of tip which has 45 ° reflecting mirrors delivers CO<sub>2</sub> laser beam on wall of vagina as vertical

Vagina relaxation describes weakness and laxity of the vagina, caused by ageing, childbirth, vaginal injury, etc. Gynolaser is capable of improving this condition in a treatment called vaginal rejuvenation.

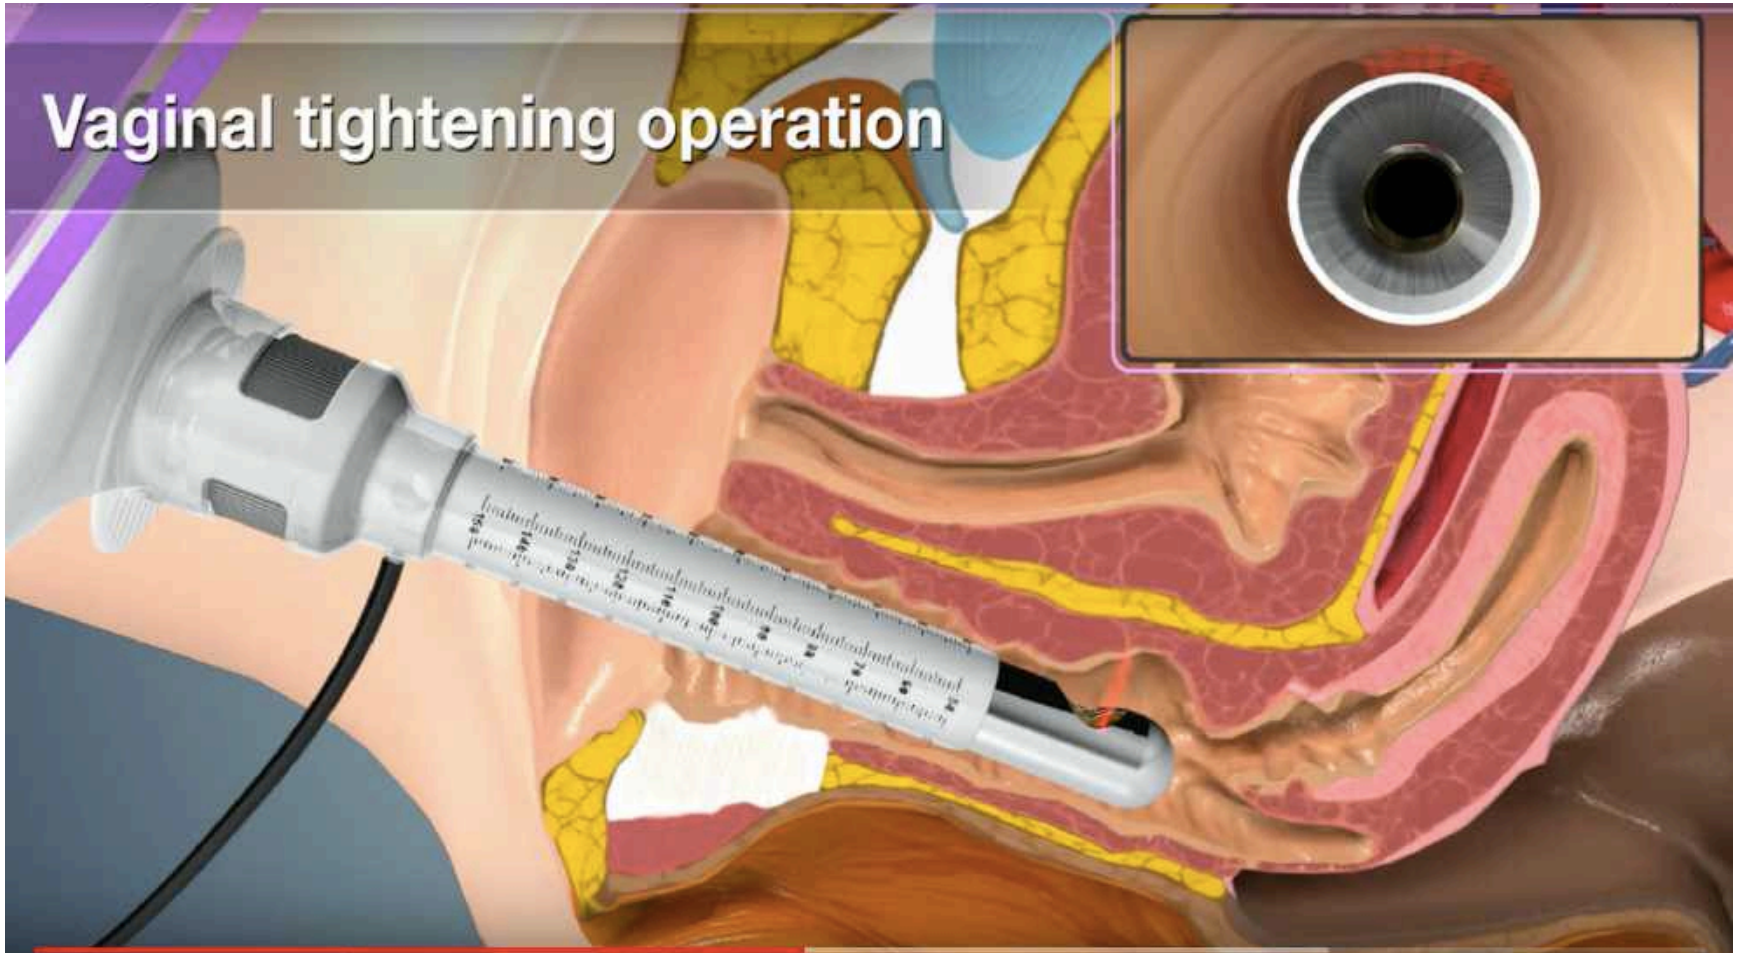

What is vagina relaxation?

## Urinary incontinence

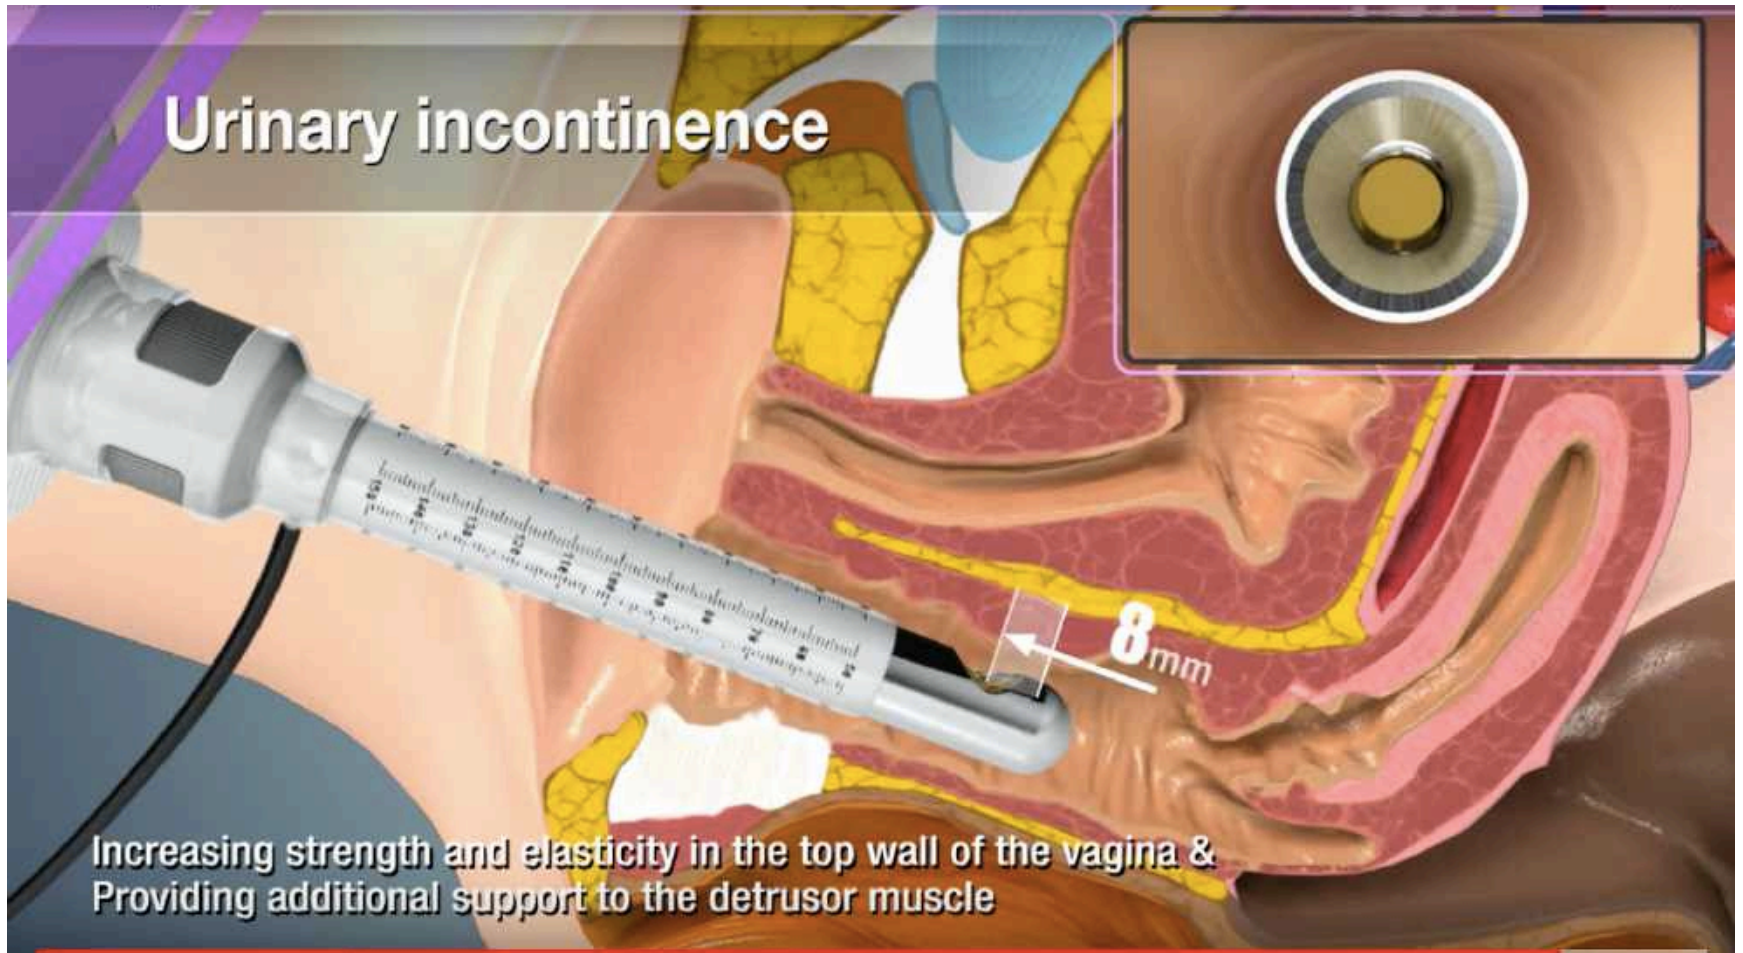

Urge urinary incontinence is caused by uncontrollable detrusor contractions. In order to stimulate the detrusor muscle using thermal laser stimulation, the urinary incontinence tip is used.

# Urinary incontinence

## Urinary incontinence

Increasing strength and elasticity in the top wall of the vagina &  
Providing additional support to the detrusor muscle
