Scientific Solution for **SIZE REDUCTION**

In comparison with other HIFU treatments, the Scizer provides a quicker treatment procedure to accomplish a slimmer body contour with minimal pain.

Pain is a deal breaker when considering any type of treatment and treatment times are often increased due to the pain levels experienced. A way to experience pain is to reduce the power levels and increase treatment times to avoid painful treatment. What if you could receive treatment at higher power levels and shorten treatment times?

The Scizer is equipped with Contact Cooling Control which applies an anesthetic effect on the surface of the skin. The numbing effect allows patients to feel less in the region, allowing a higher level of energy to be emitted to the treatment area.

The Science behind **THE SCIZER**

Treatment Principles

1
Even after exercise and dieting, stubborn fat can still be, well, stubborn.

2
The SCIZER's powerful ultrasound accurately targets fat on areas that concern you most.

3
Wearing a **compression garment** helps to condense loosely placed fat following treatment.

4
Tightening the area treated, the garment also shapes your body for the perfect contour.

Reduce your size with a body shape and contour molded to impress like never before.

SCIZER Treatment vs Liposuction Surgery

Liposuction is commonly known as a fat reduction procedure to obtain rapid change to your body shape. In recent times, with the introduction of newer technologies, these procedures have been deemed as safer alternatives to accomplish natural and gradual fat reduction. Clinical research conducted on these technologies are scientifically proven to be highly effective, assured to be safe and adamantly more convenient.

Sudden and drastic changes to your body create complications within the body and is a problematic issue. The human body and its functions are at risk as it has to adjust to the new environment and body structure.

The pros and cons of liposuction surgical procedures is composed of a long list of risks and requirements by the patient. When looking for the ultimate option which delivers the results and no excess of requirements, look no further as the Scizer delivers the scientific solution for fat size reduction, to you.

SCIZER TREATMENT

- ✓ **Non-Invasive Procedure**
- ✓ **Natural & Gradual Results**
- ✓ **15-20minutes Procedure Time**
- ✓ **No Downtime Required**
- ✓ **No Anesthesia Required**
- ✓ **No Prior Preparation Required**

LIPOSUCTION SURGERY

- Incisions Required
- Dramatic Size Reduction
- 2-3 Hour Procedure Time
- 10-20 Days Downtime Required
- High Risk of Blood Clots
- High Risk of Gallstones

Am I a good candidate?

- Have you been trying to get rid of the excess fat on your love handles, flanks and abdominal region?
- Have you tried exercising and it just won't go away?
- Do you have at least 1 inch of fat in your area of concern?

Yes! You are a good candidate to receive Scizer treatment.

The Scizer provides the safest and simplest solution to candidates who have a fat layer of at least 2.5cm or 1 inch in the area proposed for treatment.

Are You a Candidate

Before treatment

- ✓ Meet your physician for a consultation session to assess whether you are suitable for Scizer treatment. Your physician will provide you professional advice and recommendations of how the procedure will reflect the best results!
- ✓ Remember to consult with your doctor if currently taking any types of medication or if you have had prior treatment in the area of treatment.
e.g liposuction, laser or other procedures

NON-INVASIVE
BODY CONTOURING SYSTEME

On the day of treatment

- ✓ There are no prior dietary or clothing requirements for Scizer treatment, so head to your clinic wearing comfortable clothes as if it is a regular day. Your physician will plan the treatment route and mark the targeted regions with the grid template.
- ✓ When receiving treatment, lie down on the bed while the Scizer gives your body a boost! Treatment durations vary, ranging from as short as 15-25 minutes and you don't have to lift a finger! You are welcome to bring a book or electronic tablet to your Scizer session.

**REDUCE FAT WITH
A LUNCHTIME PROCEDURE**

After the treatment

- ✓ Reducing your size can not be an easier process! Once the Scizer has worked its wonders, there is nothing to worry about, return to your daily lifestyle as if nothing happened. This is the reason why we confidently express that there is no downtime!
- ✓ Results are visible immediately after treatment and gradually enhance over a period of 4-12 weeks. Swelling and redness is typically resolved within 1-2 days of receiving treatment.

FAQ

Q What is the SCIZER advantage?

A The SCIZER, a device that melts away stubborn fat, can perform both pain-free and absolute body shaping procedures, with customized sessions that also complement wearing a compression garment for the perfect S-line contour.

Q How does the SCIZER help you lose stubborn fat?

A MFSU cartridges can non-surgically heat adipocytes in the body's subcutaneous region at 9.0mm and 13.0mm, triggering coagulative necrosis to dispose of dead fat cells through your body's natural metabolism.

Q Is the SCIZER right for me?

A If you struggle with losing stubborn fat through exercise and dieting, talk to your doctor about adding the SCIZER to your body shaping journey. It's a treatment that fits multiple body profiles, designed to mold your perfect body.

Q Why wear a compression garment after treatment?

A Do you want to undergo a faster drainage of dead fat cells after your SCIZER session? How about tightening areas that were sagging before treatment? Complement your session with a body shaper to finally achieve the S-line contour you always dreamed of.
